VIOLENCE AGAINST WOMEN & GIRLS (VAWG)

Data overview and guide to the generated visual analysis

1. Project and purpose

This report accompanies the VAWG Dash Data Explorer, an interactive Python application built with Dash, Pandas and Plotly. It explores survey responses about attitudes toward reasons sometimes given to justify wife-beating. The purpose of the visual analysis is to make patterns across countries, survey years, gender and demographic groups easier to inspect. The dashboard includes interactive filters, KPI summaries, key findings, a data table and nine chart views.

2. Dataset description

The supplied CSV contains **12,600 records** and eight fields: RecordID, Country, Gender, Demographics Question, Demographics Response, Question, Survey Year and Value. It covers **70 countries** and **6 survey statements**. The available survey-year range is **2000–2018**. The Value field contains **11,187 numeric observations** used in the calculations; missing or non-numeric values are excluded from charts that require numeric values. Gender codes F and M are displayed as Female and Male in the dashboard.

Dataset records	Numeric Value records	Countries	Survey statements	Survey years
12,600	11,187	70	6	2000–2018

3. Description of the nine generated graphs

Graph	What it shows
Pie chart	Relative share of the six statement-level average agreement values. Slice percentages are not respondent shares.
Vertical bar	Compares average agreement values across the survey statements.
Horizontal bar	Ranks up to twelve countries by average agreement value in the current selection.
Scatter plot	Plots survey year against individual agreement values, with colour representing gender; large selections are sampled to at most 2,500 points.
Line chart	Shows yearly average agreement by survey statement.
Heatmap	Compares average agreement by country and statement, displaying up to fifteen countries.
Histogram	Shows the distribution of agreement values using 18 bins.
Boxplot	Summarizes the distribution, median, middle half and potential outliers for each statement.
Area chart	Displays yearly average agreement by statement using filled areas.

4. Interpretation and limitations

Important: Value represents the percentage of people surveyed in the relevant group who agree with a survey statement. It measures attitudes or perceived justifications; it is not a count or rate of actual violence and must not be interpreted as the prevalence of violence against women and girls. The dashboard calculates simple, unweighted means because the

GRAPH GUIDE

Pie chart

Compares the average agreement value for each survey statement. Each slice represents one statement; slice sizes are shares of the sum of the six statement averages, not shares of all respondents.

How to read it

Larger slices indicate statements with higher average agreement values.

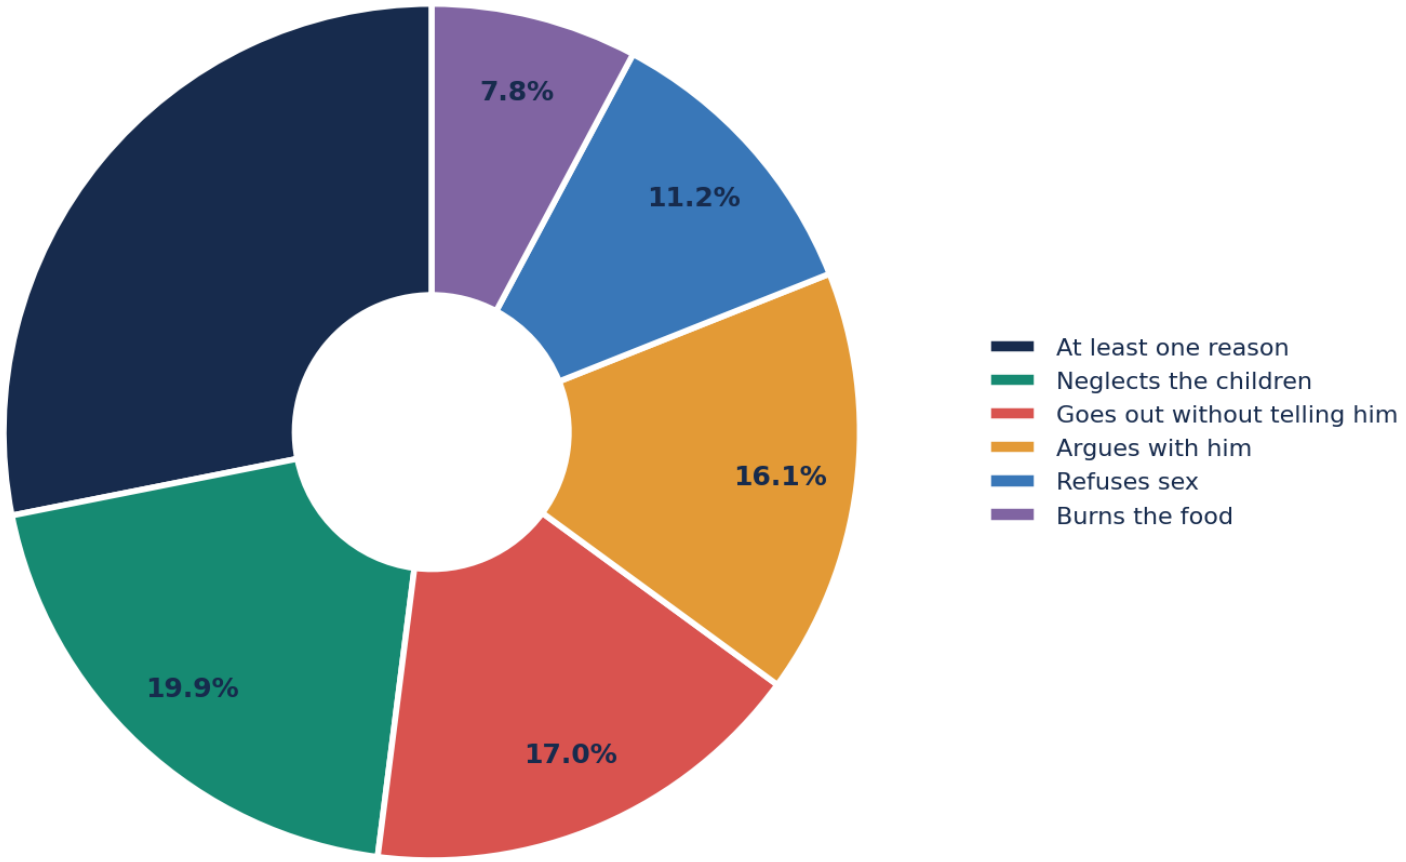

CHART 1 OF 9 · PIE CHART · Full dataset; no interactive filters applied.

GRAPH GUIDE

Vertical bar chart

Compares average agreement across the six survey statements, making differences between reasons easy to see.

How to read it

Compare bar heights. Higher bars indicate higher average agreement in the available survey records.

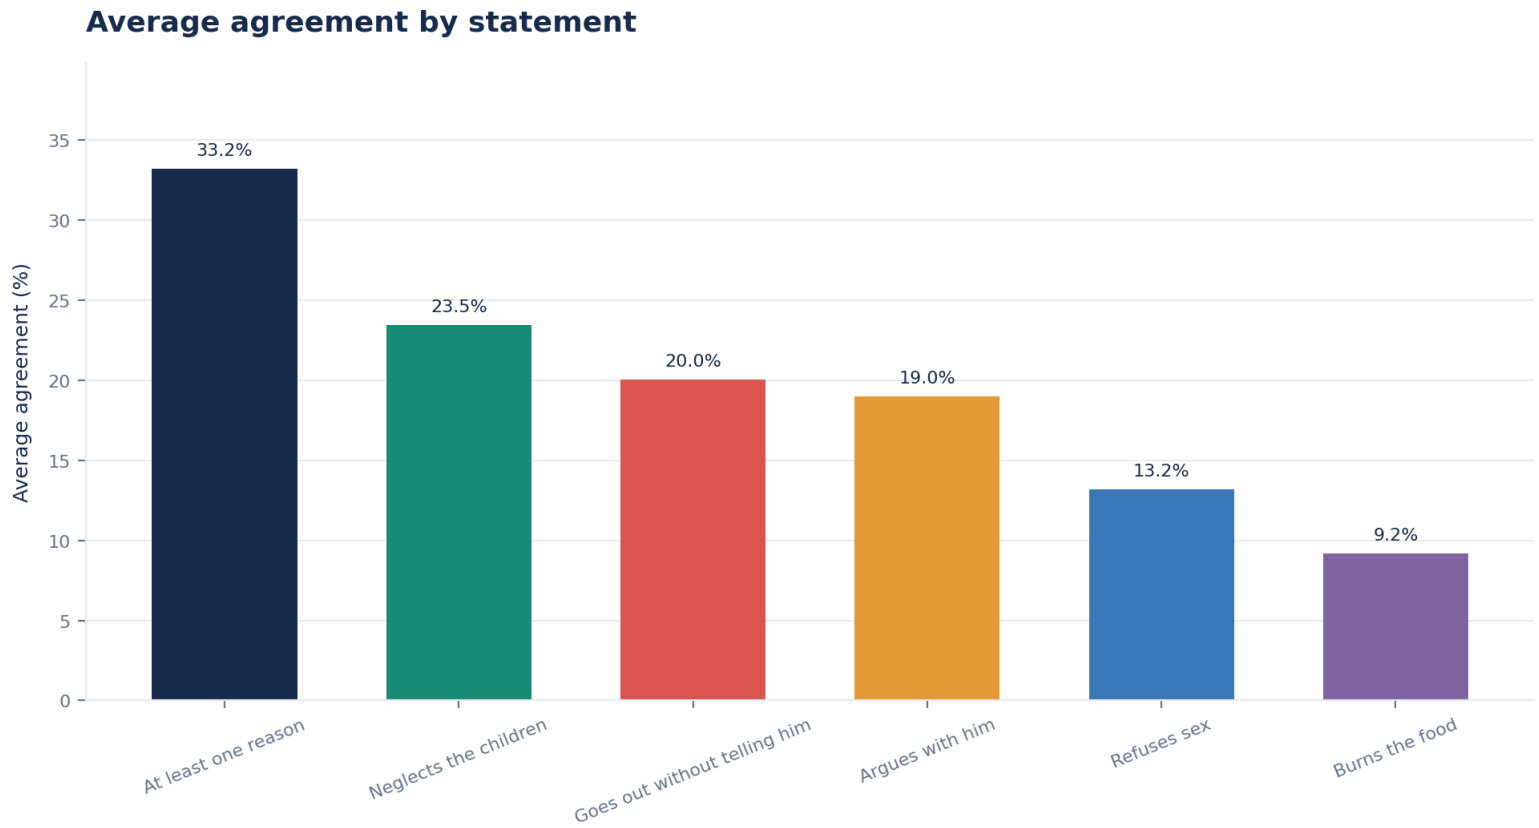

CHART 2 OF 9 · VERTICAL BAR CHART · Full dataset; no interactive filters applied.

GRAPH GUIDE

Horizontal bar chart

Compares countries by their average agreement value. The chart displays up to twelve countries to keep labels legible.

How to read it

Longer bars indicate higher average agreement. This is not a ranking of actual violence incidence.

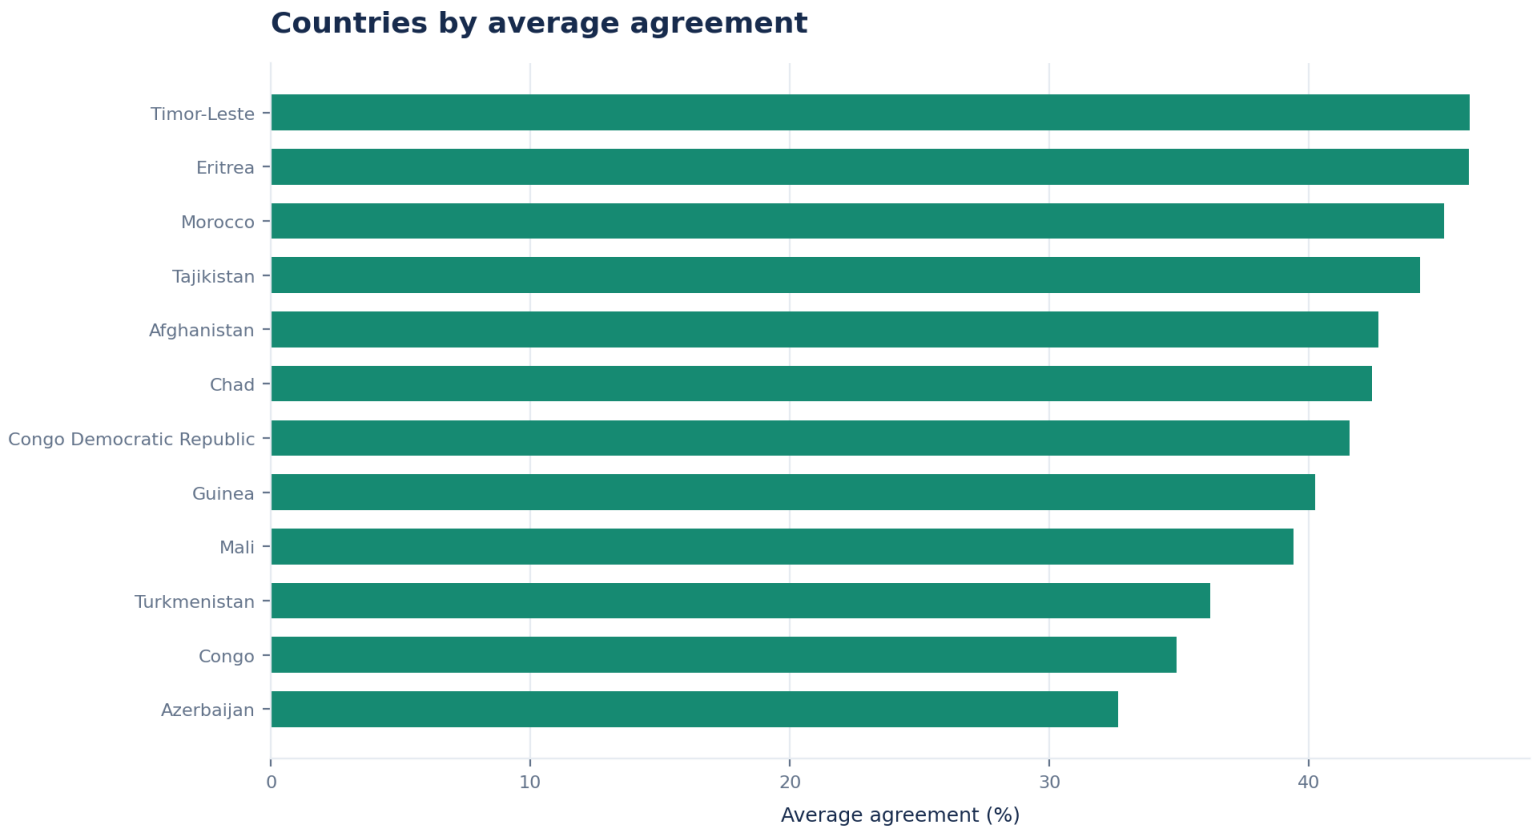

CHART 3 OF 9 · HORIZONTAL BAR CHART · Full dataset; no interactive filters applied.

GRAPH GUIDE

Scatter plot

Plots individual survey records by survey year and agreement value. Colours distinguish gender categories in the available records.

How to read it

Look for clusters and spread across years. Large selections are sampled to a maximum of 2,500 plotted records.

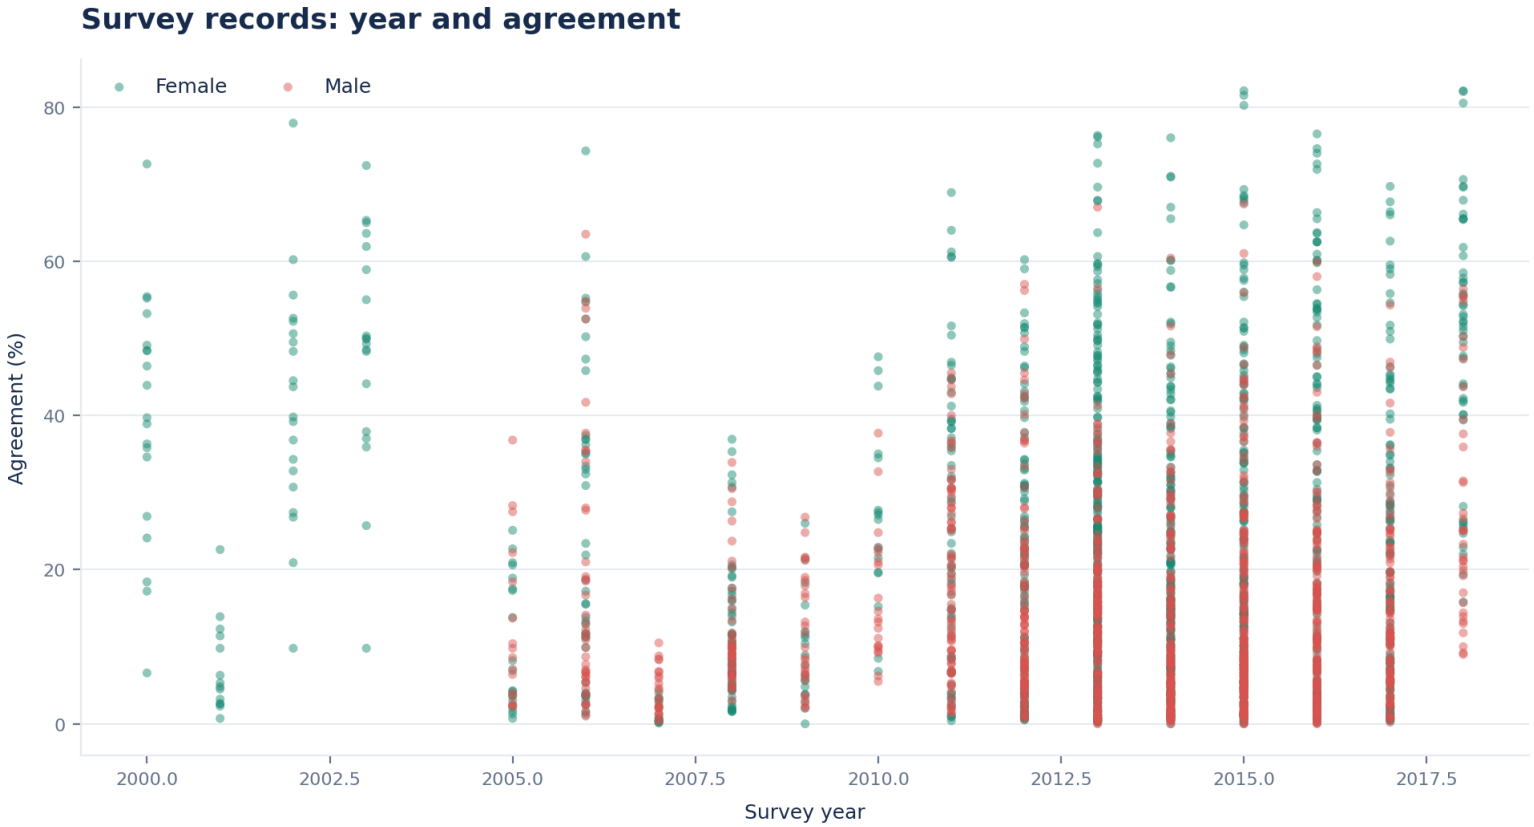

CHART 4 OF 9 · SCATTER PLOT · Full dataset; no interactive filters applied.

GRAPH GUIDE

Line chart

Shows yearly average agreement values for each survey statement, allowing comparisons of patterns over time.

How to read it

Follow each line across years. Changes indicate differences in reported agreement in the available survey data.

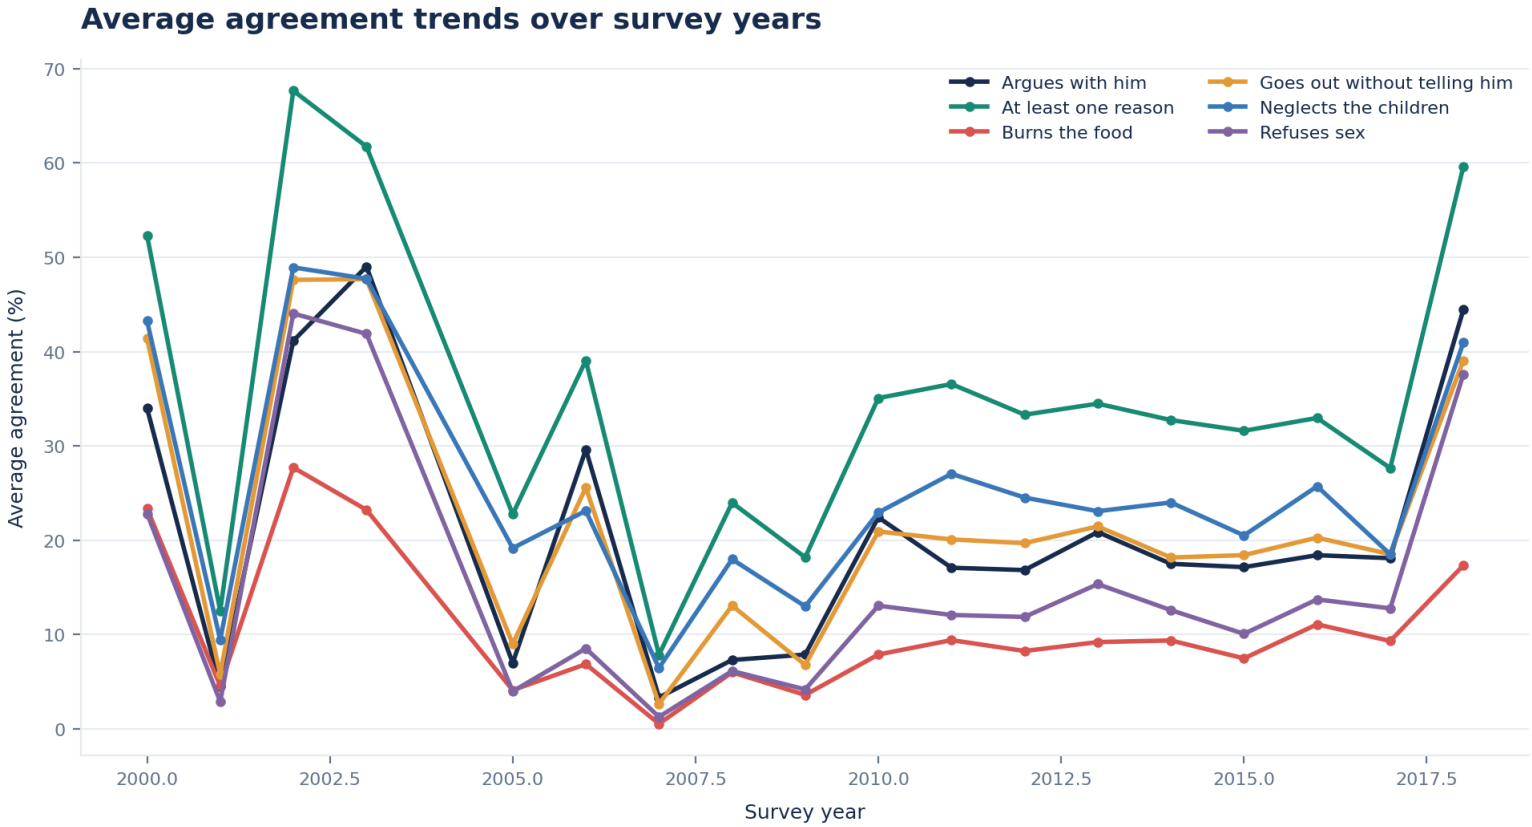

CHART 5 OF 9 · LINE CHART · Full dataset; no interactive filters applied.

GRAPH GUIDE

Heatmap

Compares average agreement across countries and survey statements. Each cell represents the mean value for one country and one statement; up to fifteen countries are displayed.

How to read it

Higher-intensity cells indicate higher average agreement. Blank cells indicate unavailable combinations.

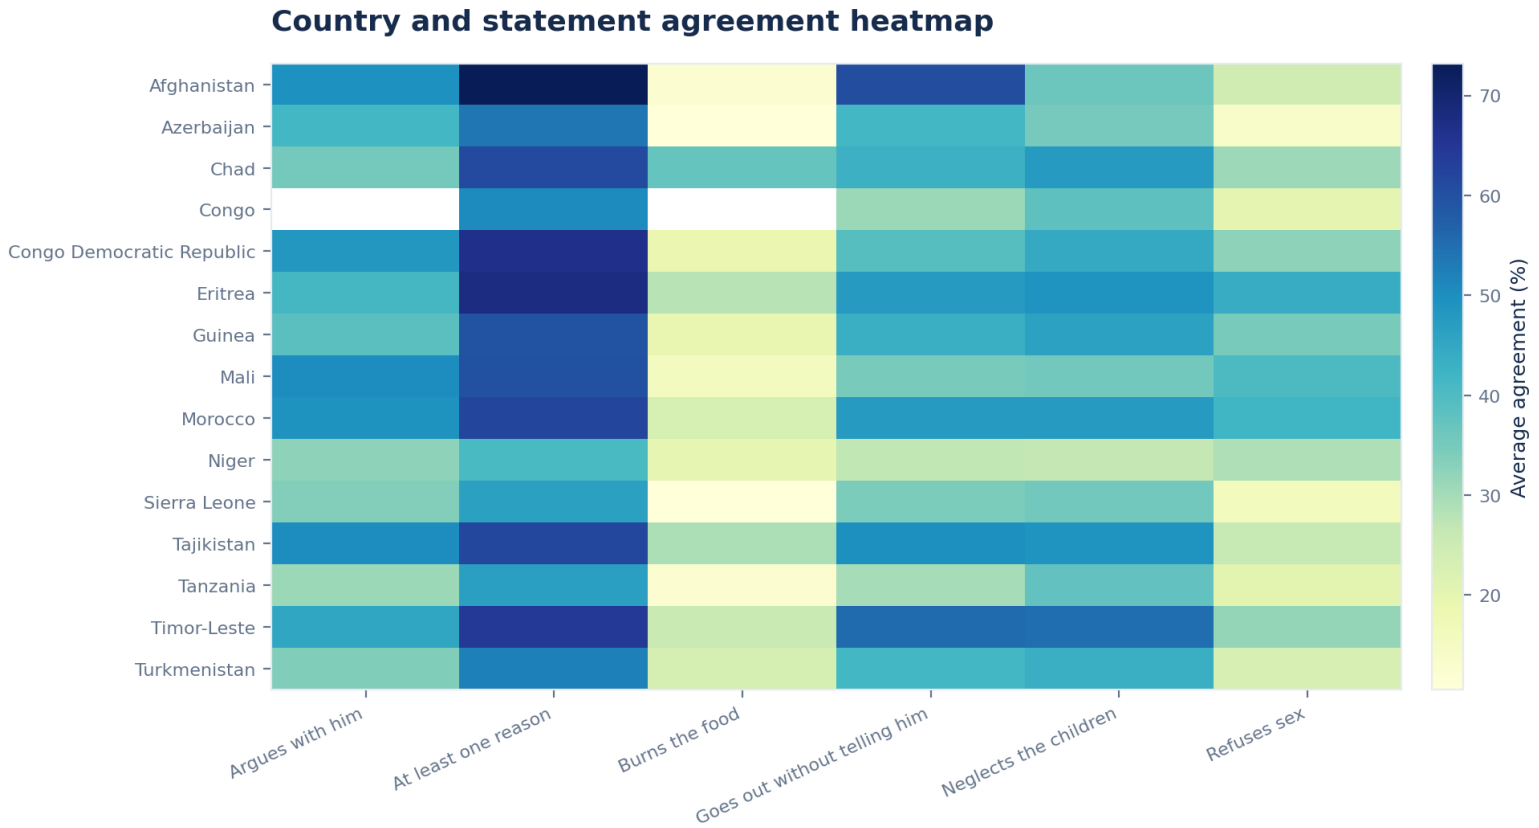

CHART 6 OF 9 · HEATMAP · Full dataset; no interactive filters applied.

GRAPH GUIDE

Histogram

Shows the distribution of agreement values grouped into intervals. Each column counts the records falling within an interval.

How to read it

Taller columns indicate ranges containing more records.

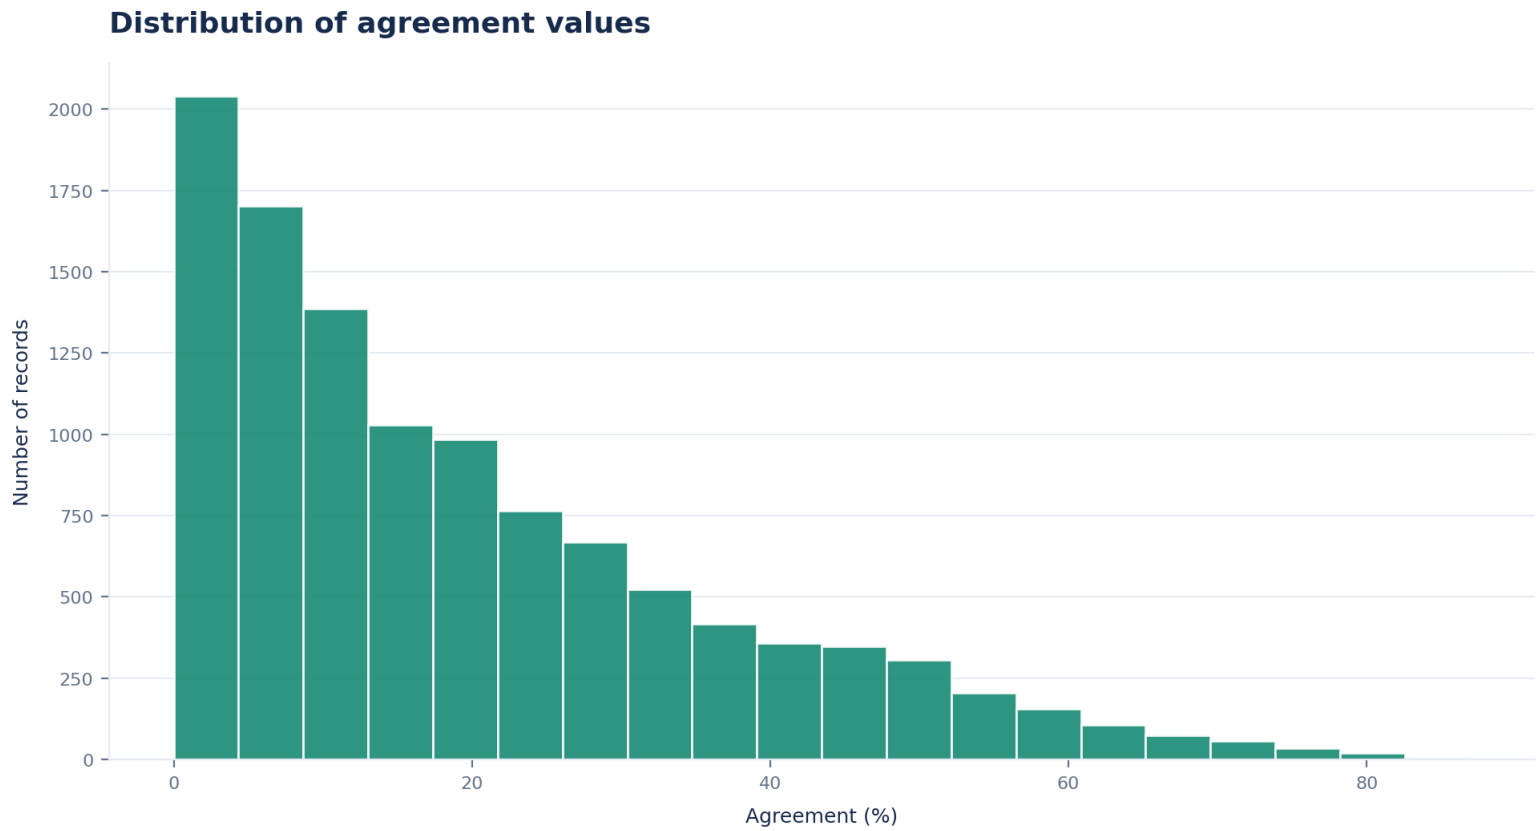

CHART 7 OF 9 · HISTOGRAM · Full dataset; no interactive filters applied.

GRAPH GUIDE

Boxplot

Summarises the spread of agreement values for each statement, showing the median, middle half of values and potential outliers.

How to read it

Compare median lines and box heights. Points beyond whiskers are potential outliers.

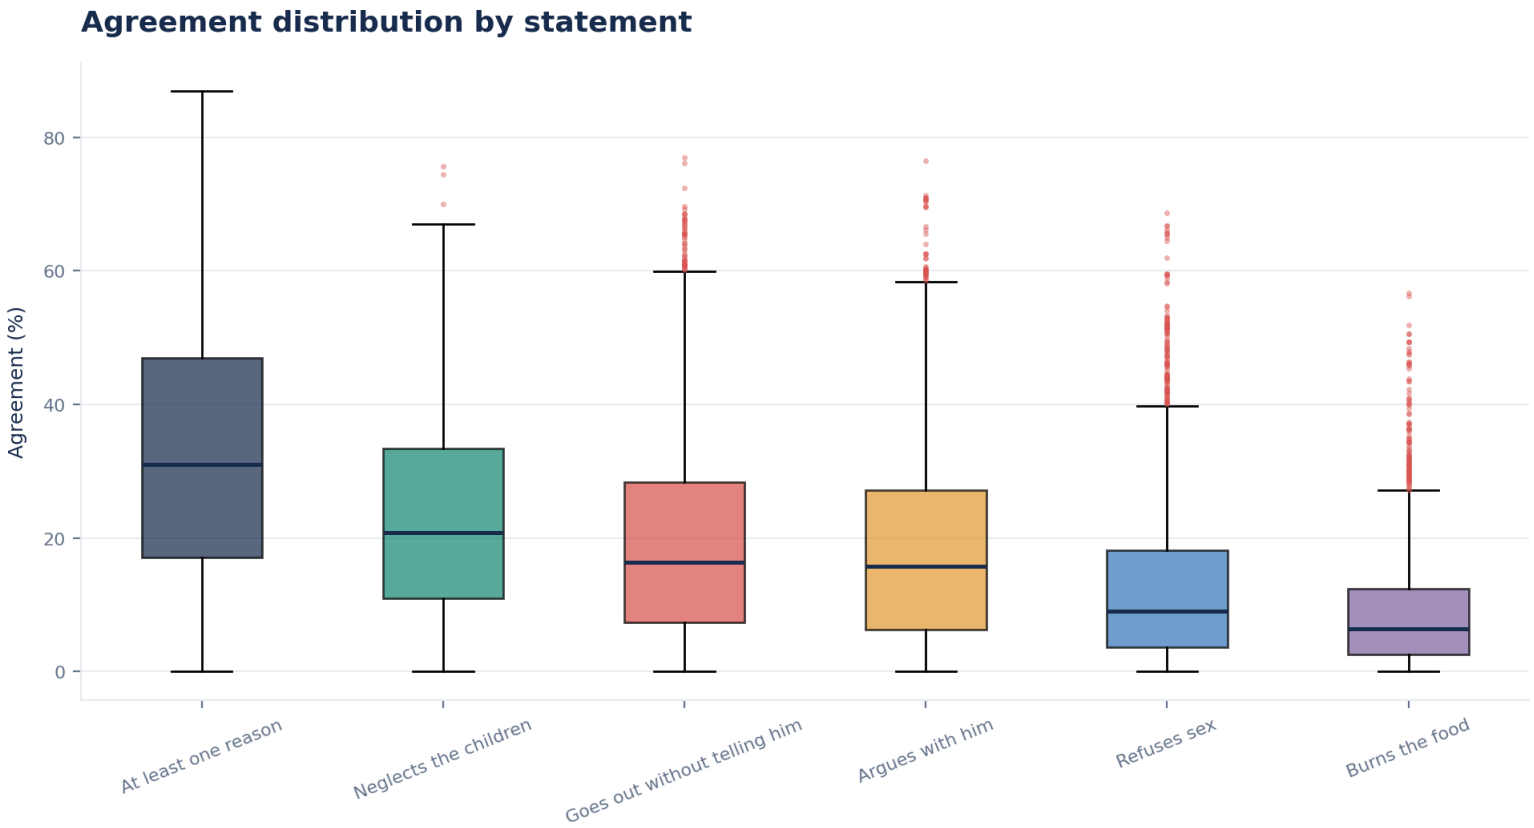

CHART 8 OF 9 · BOXPLOT · Full dataset; no interactive filters applied.

GRAPH GUIDE

Area chart

Displays yearly average agreement values for each statement. Filled areas emphasize the trend patterns; they do not represent additive totals.

How to read it

Compare the yearly series across statements, using the year and average agreement axes.

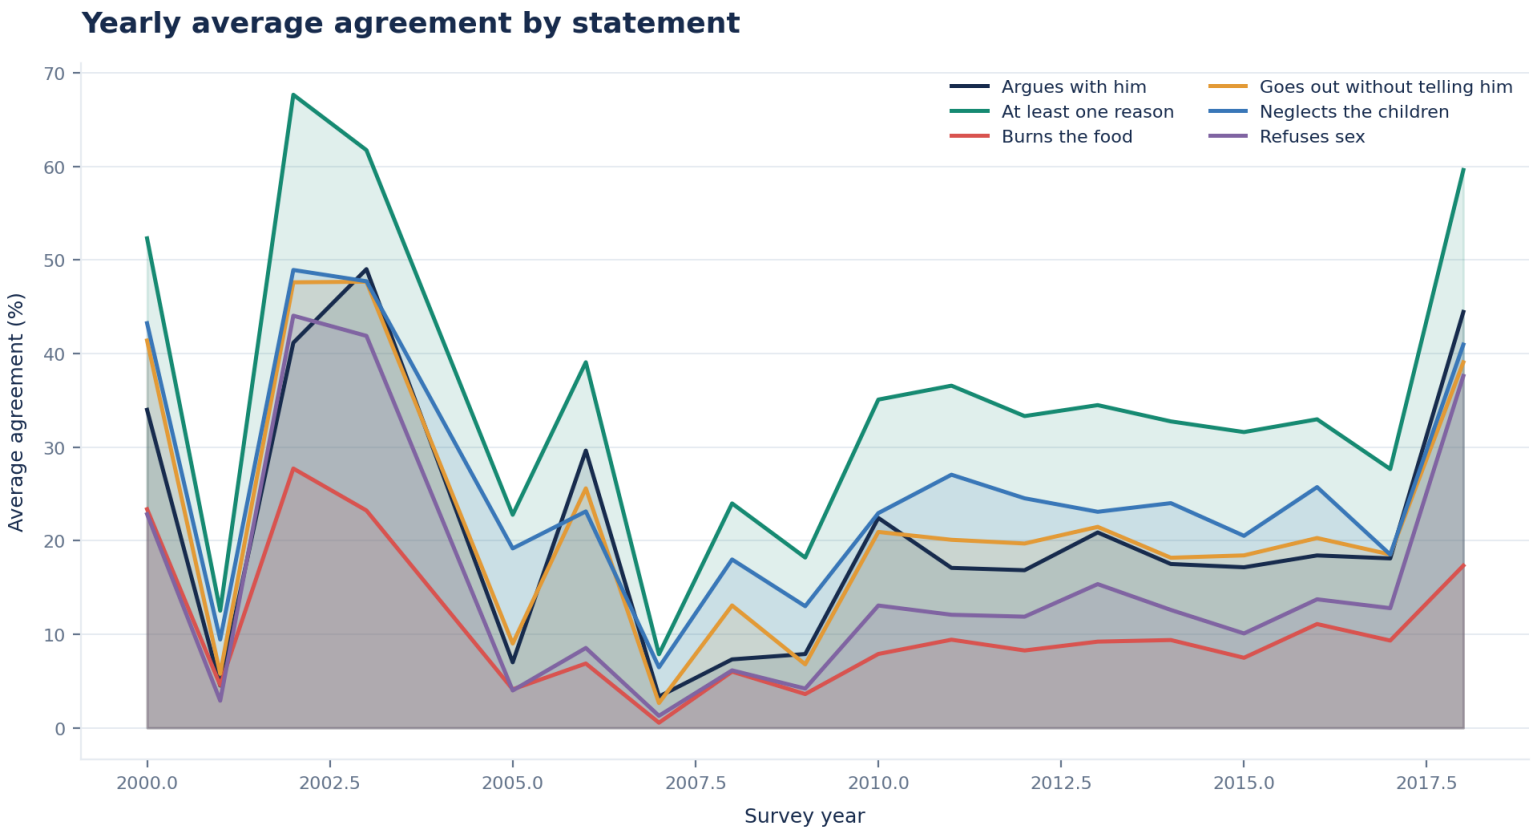

CHART 9 OF 9 · AREA CHART · Full dataset; no interactive filters applied.
